

INTRODUCTION

This plan relates to the upgrade of the public realm in Boyle, from 'The Crescent' through the town centre to the King House, taking in Bridge Street, Main Street, Patrick Street and the walk along the Boyle river.

THE CRESCENT

It is proposed to reposition the car parking from the centre to the perimeter of the crescent, to allow the construction of a paved public space. The clock tower in front of the former court house will be the focal point of the space. A small piece of public sculpture within a circle of trees will also be provided. The new space is to be lined with trees on its South and West sides.

BRIDGE STREET

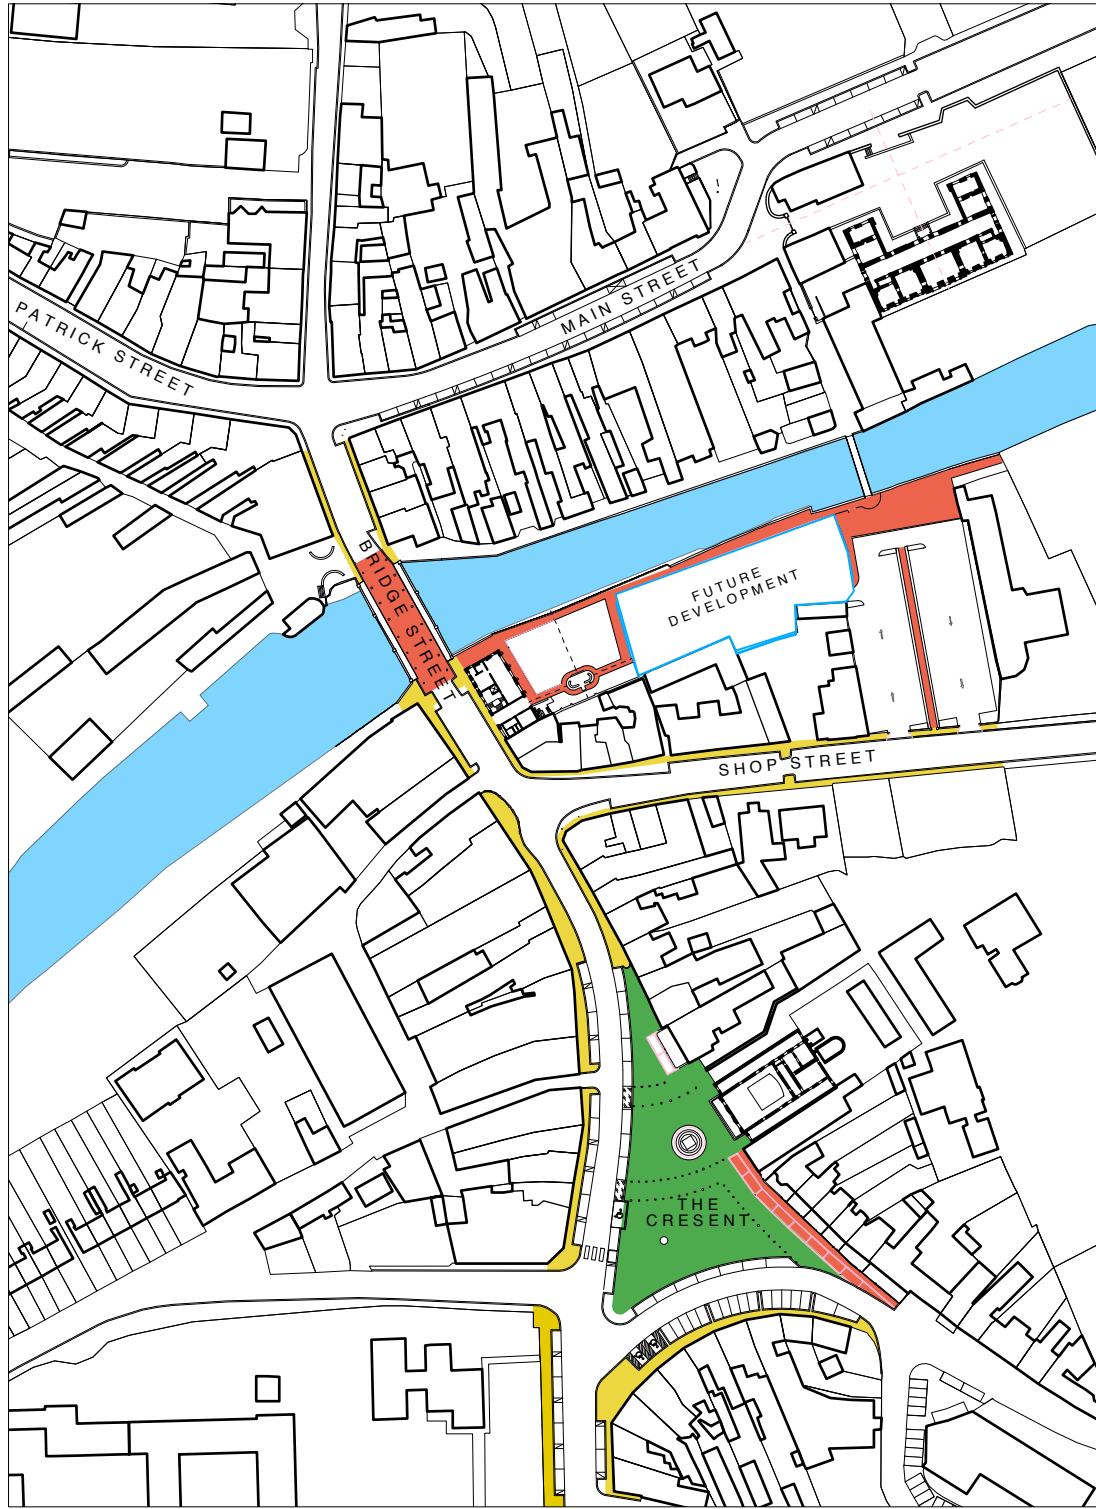

The 19th century stone bridge is to be upgraded as a focal point for the centre of the town. It is to be paved in stone sets with a row of stone bollards either side separating cars from pedestrians. The bridge will also be flood-lit at night. The footpaths along bridge street will be re-paved and widened where possible.

RIVER WALK

Following on from the redevelopment of the former Royal Hotel, the area along the river has been re-planned to open up a river walk from Bridge Street to the Pleasure Gardens. This facilitates the potential development of the former car park area at the rear of the Hotel. The existing car park, accessed from Shop Street, is to be re-organised to a more efficient layout incorporating a pedestrian walkway through to the footbridge over the river. The paving of the footpaths on Shop Street is also to be upgraded.
